

CADconform / BHP Billiton and Engineering CAD Solutions Services

CADconform Overview

By using CADconform you will ensure your CAD data is 100% standards-conformed. CADconform helps projects run faster and smoother with all parties accessing the same drafting menus and everyone easily checking and fixing their own drawings. It also helps reduce unnecessary HS&E risks, by reducing communication errors. Reliable CAD data also opens the door for advanced processing of drawings that saves time and money, such as:

- Asset management
- Geospatial information
- Document management
- Material takeoffs

Licencing and Usage

CADconform is licensed on a individual workstation basis. When using CADconform it is recommended that each MicroStation drafter uses the software / libraries as they draft rather than drafting and then CADconforming only at the end.

This approach maximises the benefit of the application and minimises the time spent drafting.

Our Services to You

Engineering CAD Solutions will arrange the software purchase, licensing, implementation, configuration and user training as part of our 1 day onsite implementation.

Pricing

Software pricing starts at just \$1,349 ex GST with discounts available for packs of 5 licenses or more at one time (saving approx \$1,500). Annual upgrade subscription program (upgrades and remote technical support) is also available via AltiyaSoft (Perth), the developers of CADconform.

Should you require local or onsite technical support for CADconform and/or MicroStation we look forward to being able to assist.
